

Buying new energy efficient equipment?

Claim a tax break by choosing products on the Energy Technology List which help you reduce your energy costs.

The Energy Technology List (ETL) is a government list of energy saving products used by businesses. With nearly 17,000 listed products the ETL is one of the world's largest databases of top performing energy saving products.

Technology Groups

ETL technologies include:

- > Air-to-air energy recovery
- > Automatic monitoring and targeting (AMT) equipment
- > Boiler equipment
- > Combined heat and power (CHP)
- > Compressed air equipment
- > Heat pumps
- > Heating, ventilation and air conditioning (HVAC) equipment
- > High speed hand air dryers
- > Lighting
- > Motors and drives
- > Pipework insulation
- > Refrigeration equipment
- > Solar thermal systems
- > Uninterruptible power supplies
- > Warm air and radiant heaters
- > Waste heat to electricity conversion equipment

Enhanced Capital Allowance

Businesses that purchase products listed on the ETL can claim an Enhanced Capital Allowance (ECA*) - a first year 100% accelerated capital allowance that delivers all available tax relief in 1 year. This is equivalent to 5.5 times the benefit of standard tax relief in the year of purchase.

Consider embedding the ETL into your procurement processes to ensure your business buys energy saving products.

Doing this will reduce the time it takes your business to find good quality products, and can deliver resource, energy and financial savings.
